

Green Mission Statement

At Prince Sterilization Services, LLC, we are committed to advancing healthcare while safeguarding our planet. As a leading contract sterilization provider, we specialize in the clean and efficient sterilization of ready to use (RTU) components, pharmaceuticals, medical devices, & other health care items, ensuring the highest standards of safety and effectiveness. Our dedication to sustainability is woven into our operations, driving us to innovate and adopt environmentally responsible practices.

Core Principles of Our Green Mission:

1. **Eco-Friendly Sterilization:** We exclusively use clean sterilization methods that minimize environmental impact, ensuring a healthier future for our planet and its inhabitants. Our sterilization modalities include steam (water vapor), dry heat (air), and vaporized hydrogen peroxide (H_2O_2 – broken down into oxygen and water).
2. **Energy Efficiency:** Our state-of-the-art facilities are designed to optimize energy consumption. We will explore new technologies and processes that reduce our carbon footprint while maintaining the highest level of service and reliability. For instance, Prince's facilities are equipped with long-lasting and energy efficient lighting. Prince's automated washing line conserves water through the conscious addition of a re-filtered recycling station. Whenever applicable, Prince's equipment has been sourced with heat reclamation abilities as well.
3. **Waste Reduction:** We implement waste management protocols to minimize, recycle, and properly dispose of any byproducts from our manufacturing processes. For instance, our waste is segregated (glass, paper, and plastic) for recycling purposes. Our stainless-steel trays used for vial processing are re-inspected and re-used if possible to reduce waste. We are also phasing out paper-based batch records and implementing electronic batch records.
4. **Sustainable Sourcing:** We collaborate with suppliers who share our commitment to sustainability, ensuring that all materials and resources used in our operations are ethically sourced and environmentally friendly.
5. **Continuous Improvement:** Sustainability is a journey, not a destination. We are dedicated to ongoing evaluation and enhancement of our sustainability initiatives.

At Prince, our mission is to be the trusted partner in outsourced pharmaceutical and medical device sterilization, RTU components, and packaging while championing sustainable development. Together with our clients, employees, and stakeholders, we are paving the way for a healthier, cleaner, and more sustainable world.
